

Long-Term Information Health Check

Is your important content at risk?

Complete this self assessment & identify if information is at risk

Yes

- 1 Is our legacy system content retained and maintained in a manner which ensures continued access & readability over decades?
- 2 When called upon can each files integrity & trustworthiness be easily proved?
- 3 Can obsolete formats in your information estate still be used by the organization?
- 4 Can files & metadata be consistently transferred to an archive securely, especially at scale?
- 5 Can the full context of our information be retained as a complete package?
- 6 Can archived content be easily searched, retrieved & then used on-demand even if original file formats are now obsolete or unsupported?

If you can't say yes to all the questions it is likely your long-term content today is at risk of data loss—
